Copilot Readiness Assessment

Embrace Microsoft's AI assistant to provide secure, compliant and accurate efficiencies

Copilot Readiness Assessment

AI will unleash potential across SMEs however it will also cause unintended issues for the unprepared

It has the potential to revolutionise business processes, deliver efficiencies and increase productivity for SMEs. However widespread adoption opens a range of previously unseen risks with AI behaviour and learning that will expose poorly prepared organisations.

Get ready for secure, compliant, and accurate AI adoption, to avoid:

- Sharing confidential information
- Usingout of date information
- Infringing copyright
- Prompting misinformation
- Misrepresenting your organisation

The Copilot Readiness Assessment agenda:

1. Understanding of the strategic business case for AI adoption
2. End user engagement to understand existing workflows and opportunities
3. Copilot and what it can achieve for your organisation
4. Technical assessment of your organisation's readiness for AI
5. Delivery of the Copilot Readiness Roadmap

What can Copilot do for your organisation?

- As the Microsoft AI assistant, it will live within the Microsoft 365 suite of services, delivering efficiency and productivity improvements to organisations that implement secure and compliant adoption. Including:
- Enhance usability of the Microsoft 365 suite, leverage the assistant's comprehensive knowledge with innovative suggestions of how to solve your team's challenges
- Save time, the AI model will be able to save time by reducing the need for manual processing
- Improving output with AI assistance making users better at their key skills and upskilling quickly where required

You will learn:

Presented by TMT to your key stakeholders at the end of the Assessment, the Copilot Readiness Roadmap will:

- Establish your organisation's needs and use cases for Copilot
- Audit your existing data/information governance policies
- Create a strategic roadmap to prepare your organisation for AI adoption
- Recommendations for the most appropriate

For organisations who:

- Want to embrace the future of AI assistants but struggle to know where to start
- Looking for operational efficiencies and productivity savings
- Looking to empower their teams with the latest technology
- Have engaged with ChatGPT but are concerned about the security of the OpenAI methodology

Embrace the future of AI by asking the expert
