Cybersecurity Starts Here

Passwords are the weakest
link in organisations'
cyber defences

86% of data breaches are a result of weak employee passwords, according to Verizon. Securing your employee's passwords is critical to protecting your bottom line, reputation and avoid regulatory fines.

Strong passwords are more than: upper case, lower case, numbers and special characters

A strong alphanumeric password only maintains its strength as long as it is kept secure. Even the strongest passwords are undermined by four common insecure practices:

- The same password used across multiple systems, including at work and at home
- Unencrypted sharing of passwords between employees and teams
- Unprotected password storage in applications like excel and notepad
- Multifactor authentication not being used for further protection
- Protect your business systems from cyberthreats by securing employee passwords using the TMT Password Manager.

The TMT Password Manager:

- Reduces the threat of password-related data breaches and cyberthreats
- Enforces highest standards in password generation through automated strong random passwords
- Encourages employee usage with easy to use automated password entry across mobile applications and browsers for users
- Prevents employees from having to remember and reuse a library of credentials with a single master password
- Strengthens organisations compliance and security posture

Seamlessly integrates with Azure Active Directory or Open LDAP

With automate syncing to enable inherited groups/departments/profiles from a single master location. Ensuring employees have access to all the required systems while limiting the password sharing to only those who require access.

For organisations who:

- Need to secure their credentials
- Have employees who share passwords insecurely with spreadsheets / email
- Use a variety of business critical systems
- Lose time and productivity as a result of forgotten passwords

Powered by Keeper Security

Keeper Security is transforming cybersecurity for people and organisations around the world. Keeper's affordable and easy-to-use solutions are built on a foundation of zero-trust and zero-knowledge security to protect every user on every device.
