

Comprehensive Application Patch Management

Keep your third party applications up to date.
Secure your data and remain compliant.

Protect your organisation's IT investments
with secure remote patching for your
commonly used 3rd party applications.

In addition to the security and critical Operating Systems patching managed by Tailor Made Technologies, third party application patching ensures that your organisation's systems and data are kept secure. Application patching provides the latest features whilst also reducing the likelihood of a vulnerability being exploited in your environment.

Why use TMT's Application Patch Management?

1. Maximise Application Performance: Enjoy faster loading times, better resource management, and bug fixes as soon as the software provider launches them.
2. Ensure regulatory compliance: Keep your software compliant with the latest regulations and industry standards including Cyber Essentials.
3. Keep software compatible: As technologies advance, keeping your software up-to-date keeps your critical software functional.
4. Automated patch installation: Never rely on end-users downloading the required updates, as updates are pushed remotely onto their devices.
5. Ongoing monitoring: TMT tracks the patch deployment process and ensures that patches are applied successfully.
6. No setup fee: As soon as we receive your order we shall enable this service for you.

Security concerns for unpatched software

Cyber criminals target commonly used third party applications as their access point to compromise IT systems.

Keeping the applications up-to-date with the latest security patches reduces this risk significantly, by protecting your organisations:

- Sensitive data
- Reputation
- IT Infrastructure

Improve your security posture, to help with:

Keep your critical systems up-to-date:
